Reference list for commercial vehicles

FAG repair solutions as a high-quality alternative

Manufacturer: All

Part. no.: All FAG part numbers

Design: Tapered Roller Bearing (TRB)
 Insert Unit (IU)
 Truck Hub Unit (THU)
 Truck Axle Module (TAM)
 Repair Insert Unit (RIU)

FAG has been offering innovative repair solutions for wheel bearings for many years. These solutions enable the company to provide customers with high-quality yet cost-conscious repairs.

Given that the designs of some FAG wheel bearings differ from the original spare part, it is not possible to provide references for the electronic spare parts catalogue in these cases. For example, sometimes the vehicle or axle manufacturer installed a wheel bearing with the "Insert Unit" design in Production, but FAG can offer a repair solution that uses a "Repair Insert Unit" (RIU), thanks to technical developments.

In the worst case scenario, the FAG repair solution cannot be found by using the original spare parts number to conduct a search.

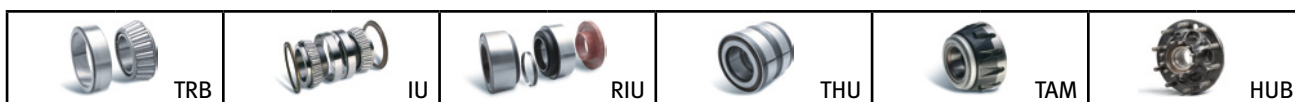

In order to counteract this problem, Schaeffler Automotive Aftermarket provides a list with which the FAG repair solution can be identified, from the OE reference no.

Image 1: Overview of the FAG product range for commercial vehicles

The table on the following pages lists all of the references relating to FAG repair solutions that differ from the original design.

The up-to-date, complete reference list is available at www.RepXpert.com or in the FAG main commercial vehicle catalogue.
